

Step-by-Step Instructions Opening Your Student Locker

STEP 1:

Spin the locker dial several times to the right to "clear" the lock.

STEP 2:

While continuing to turn the lock dial to the right, stop at the first number in your combination.

STEP 3:

Once stopping at the first number, turn the dial to the left to the second number in your combination.

IMPORTANT: you MUST pass the number listed first in the combination before stopping on the second number!

STEP 4:

Once stopping at the second number, turn the dial to the right. You will begin to feel resistance before reaching the third number. While holding the dial in one hand while maintaining resistance on the dial, pull the dial to open the locker.
